

Feasibility Study No. CGC-20240621 CCSA

Carbon Capture and Soda Ash Production Unit (CUSTOMER_FURNACE)

for

CUSTOMER_COMPANY

CUSTOMER_STREET, CUSTOMER_ZIPTOWN (CUSTOMER_COUNTRY)

presented by

CGC Capital-Gain Consultants GmbH

Friedrichstrasse 95, 10117 Berlin (Germany)

Contents

1. Assignment	4
1.1. Methodology	4
1.1.1. Techno-Economic Assessment (TEA)	4
1.1.2. Return-on-Investment (ROI)	4
1.1.3. Evaluating the Feasibility	4
1.1.4. Software used.....	4
1.2. Liability Disclaimer	4
2. Executive Summary	6
2.1. Scope.....	6
2.2. Main assumptions	6
2.3. Results.....	6
2.4. Recommendations	6
3. Decarbonization in the Glass Industry	8
3.1. Optimize fuel sources (Scope 2 emissions).....	8
3.2. Remove CO ₂ from the glass production process (Scope 1 emissions)	8
4. Process Description	10
4.1. Stoichiometry	10
4.2. References	10
5. Modelling Assumptions	11
5.1. System Boundaries.....	11

5.2.	Glass Melting Furnace	11
5.3.	Flue Gas	11
5.3.1.	Composition.....	11
5.3.2.	Flow.....	11
5.3.3.	Adjustments before Treatment.....	11
5.4.	Reactor	11
5.5.	Crystallizer and Filter	11
5.6.	Neutralizer	11
5.7.	Dryer	11
6.	Process Simulation	13
6.1.	Design Cases.....	13
6.2.	Results.....	13
6.3.	Limitations and Exclusions	13
7.	Return-of-Investment	16
7.1.	Selected Design Cases.....	16
7.2.	Conclusions	16
8.	Benchmark Amine-based Scrubbing	18
9.	Recommendations	20
10.	Appendix A: Data provided by the Customer.....	22
